RENSSELAER UNION

union-doc.cls Feature Demo

A one-page tour of every public command

Compiled April 21, 2026 with LuaLaTeX

Contents

Article I — Structural Commands 2
Section 1 — Paragraphs and notes 2
Section 2 — Nested numbered lists 2
Section 3 — Brand colors 2
Section 4 — Assets, fonts, and logos 2
Section 5 — Call-outs and reusable title blocks 3
Amendment 1 — Adding an Amendment Block 3
Amendment 2 — An Amendment Without a Note 3
Article II — Summary 3

This document is a non-binding demonstration of `union-doc.cls`.

Article I — Structural Commands

`\DocArticle` renders a red, centered heading and adds it to the table of contents. Its first argument is an internal hyperlink label (used by `\hyperref`), and the second is the visible title.

Section 1 — Paragraphs and notes

`\DocParagraph` wraps a block of body text in the correct font, justification, and clause spacing. Use it instead of writing raw text between commands.

[`\DocBracketNote` renders italic parenthetical commentary that is not itself a numbered clause.]

Footnotes are written with `\DocFootnote`[1]. The first argument is an identifier reserved for future cross-referencing; the second is the footnote body.

Section 2 — Nested numbered lists

The class preconfigures four `enumerate` levels: **1.**, **i.**, **a.**, and **1)**. Just nest the standard `enumerate` environment — do not load `enumitem` yourself.

1. Top-level clause (`1.` label).
    i. Second-level clause (`i.` label).
        a. Third-level clause (`a.` label).
            1) Fourth-level clause (`1)` label).
2. Another top-level clause, to show spacing between items.

Section 3 — Brand colors

Three named colors are defined: **UnionRed** (`#D6001C`), **UnionBlack** (`#000000`), and **UnionWhite** (`#FFFFFF`). Use them anywhere with `\color` or `\textcolor`.

Section 4 — Assets, fonts, and logos

The class exposes three overridable asset paths: `\docFontPath` (default `../../Font_Assets/`), `\docLogoPath` (default `../../Commonly_Used_Logos/`), and `\docSubtitledLogoPath` (default `../../Subtitled_Logos/`). Both logo directories are added to `\graphicspath` and `\svgpath` at class-load time, so you can reference any logo by its bare filename:

[1] This is a footnote generated by `\DocFootnote{demo}{...}`.

The left image above was loaded with a plain `\includegraphics{Primary_Logo_Black.png}` — no path prefix required. The right image uses the `\DocLogo[⟨opts⟩]{⟨file⟩}` convenience command, which resolves the same search path and falls back to a red "Rensselaer Union" wordmark if the file is missing.

A monospace family, RPI Geist Mono, is also declared on the same `\docFontPath` and is available as `\docMonoFont` for inline use.

Section 5 — Call-outs and reusable title blocks

`DocPanel` is a red-bordered tcolorbox environment for highlighting a notice or pull quote anywhere in the body:

> This is a `DocPanel`. Use it to draw attention to an editorial note, a ratification stamp, or any block of text that should visually stand apart from the surrounding clauses.

`\DocTitleBlock{title}{subtitle}{note}` renders a centered hero block. Any argument may be left empty:

Section Divider

Used mid-document to announce a new part

All three arguments are optional — leave empty to suppress

Amendment 1 — Adding an Amendment Block

Adopted 2026-04-21

Demonstration subtitle

`\DocAmendment` is visually identical to `\DocArticle` but semantically marks an amendment. `\DocAmendmentSubtitle` takes a required subtitle and an optional secondary note (pass an empty second argument to omit it).

Amendment 2 — An Amendment Without a Note

Adopted 2026-04-21

When the second argument of `\DocAmendmentSubtitle` is empty, the note line is silently suppressed.

Article II — Summary

You have now seen every public command exposed by `union-doc.cls`: the cover hooks (`\docPdfTitle`, `\docTitle`, `\docSubtitle`, `\docCoverNote`, `\docCoverLogo`, `\docTocDepth`, `\docTocFooter`), the front-matter builder `\MakeUnionDocFrontMatter`, and the body commands `\DocArticle`, `\DocSection`, `\DocParagraph`, `\DocAmendment`, `\DocAmendmentSubtitle`, `\DocBracketNote`, and `\DocFootnote`.
